Open to remote & relocation · Turkish citizen (no visa required in Turkey; sponsorship required elsewhere)

Summary

Software engineering graduate (BSc & MSc) who learns by shipping real projects rather than just studying theory. Built and deployed a full-stack multimodal chatbot (FastAPI, React/TypeScript, LangChain, Docker) that classifies plant diseases from photos and explains them conversationally; an MSc thesis project predicting ESG scores with machine learning across 101 companies and 539 features; and a personal portfolio site built from scratch in HTML/CSS/JS and deployed via GitHub Pages. Comfortable working across the stack, picked up Git/GitHub from the command line, adapts quickly, and follows through. Looking for a junior software engineering role to keep building alongside a team.

Projects

Leafy — Multimodal Plant Disease Chatbot

Python · FastAPI · TensorFlow · LangChain · React · TypeScript · Docker github.com/noxumoon/leaf-disease-app

- Built a full-stack app that classifies plant leaf diseases from an uploaded photo using a trained CNN, then explains the diagnosis and answers follow-up questions through an LLM-powered chatbot with conversation memory.
- Designed the API with FastAPI and the chat UI with React, TypeScript, and shadcn/ui; containerized both services with Docker Compose.

ESG Score Prediction Using Machine Learning (MSc Thesis)

Python · scikit-learn · pandas · Jupyter Notebook github.com/noxumoon/esg-scoring-model

- Built and compared multiple machine learning models to predict company ESG (Environmental, Social, Governance) scores, using data from 101 companies across 539 financial and sustainability features.

Personal Portfolio Website

HTML · CSS · JavaScript · Git/GitHub noxumoon.github.io/portfolio

- Designed and built a dark-themed portfolio site from scratch (hero, about, skills, projects, contact) and deployed it live via GitHub Pages.

Experience

IT Support Intern — Noor Credit Institute

04/2021 – 07/2021

- Assisted with computer and software installations and resolved basic technical issues for end users.
- Supported the team in day-to-day IT operations, gaining hands-on exposure to software and systems fundamentals.

Education

MSc in Computer Software Engineering — Istanbul Aydın University

09/2022 – 01/2026

- Thesis: AI-based ESG scoring model using machine learning and NLP (see Projects).

BSc in Computer Software Engineering — Azad University, Gorgan Branch

09/2017 – 09/2021

- Developed an e-commerce website using PHP and PhpMyAdmin; coursework covered front-end/back-end fundamentals and database design.

Technical Skills

Frontend: HTML, CSS, JavaScript, React, TypeScript, Tailwind CSS

Backend: Python, FastAPI, PHP, SQL/MySQL

AI / Machine Learning: scikit-learn, TensorFlow, LangChain, NLP fundamentals

Tools: Git, GitHub, Docker, VS Code, Jupyter

Languages: English (B2), Turkish & Persian (Native)
